

Recreational Activities Module by SERVtracker

Within our Recreation module you can track all of your center activities by site, client, date, activity, and unit. You can customize your activity listing by adding as many activities by site that you chose. You also have the ability to create custom categories for each activity so reporting by category can be accomplished as well.

If you're looking for a streamlined activity scheduler we've got the tool for you. Create custom schedules that can be assigned to clients with ease. You can report daily attendance logs with bar codes next to each client to make tracking of daily attendance easy.

When it comes to entering your clients for your activities, you can enter them multiple ways. They can be entered individually with a couple clicks of your mouse, enter multiple records at one time displaying a list of all active clients and selecting the ones in attendance for an activity, you can scan them in with a barcode scan gun with bar coded identification badges, or utilize our touch screen application for easy client tracking abilities. These identification badges can be generated easily in SERVtracker.

In addition to all of this functionality, you have the ability to schedule your activities per client. Once you create the schedule you can transfer the schedule to the service window for posting.

Features

- Service start date, end date and end reasons are tracked.
- Tracking of funding source by client by activity provided.
- Create and add as many activities per site as you chose.
